Art Unit: 2871

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321© may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 4, 9, 14, 20, 22-53 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-24 of U.S. Patent No. 5612799. Although the conflicting claims are not identical, they are not patentably distinct from each other because both comprise similar subject matter such as an interlayer insulating film covering the thin film transistor (TFT), a conductive film (Applicant's lead electrode) formed over

Art Unit: 2871

the interlayer insulating film and connected to the TFT through a hole of the interlayer insulating film, an organic resin film formed over the TFT and the interlayer insulating film, a pixel electrode formed over the organic resin film and connected to the TFT.

Claims 21-24 of the patent recites the two contact holes.

Materials used for the conductive film such as Al is common and known in the art.
